

Dickson achieves ISO 14001 certification, continuing its commitment to the environment and sustainable change.

Leader in environmental monitoring solutions, we are proud to announce that we are now **successfully certified to ISO 14001**, demonstrating our commitment to environmental sustainability and responsible business practices.

ISO 14001 is a globally recognized standard, providing a framework for organisations to effectively manage their impacts and improve their environmental performance. Achieving ISO 14001 certification is a testimony to our rigorous process of **establishing, implementing, maintaining**, and continually **improving** our **environmental corporate responsibility**.

Why ISO 14001?

Today we recognize that environmental sustainability is not only essential for the planet but also for the **long-term success and resilience of the business**. By integrating environmental considerations into our business operations, we aim to create value and trust for our clients and partners, reduce risks, and enhance our reputation as a responsible organisation.

More than a competitive and financial advantage, ISO 14001 also demonstrate our **compliance with current and future regulatory requirements** encouraging better involvement of our employees and inspiring suppliers to join our approach, partnering with ISO 14001 certified suppliers.

Everyday, acting for sustainability

At Dickson, our commitment to environmental sustainability is at the **forefront of our operations**. That is why we prioritize recycling across all locations and have shifted to compact packaging to reduce our environmental impact.

Our APAC facility will further enhance our environmental performance by streamlining logistics and massively reduce carbon emissions. In our US offices, **we encourage our customers to recycle their products** at no cost and promote paperless calibration operations that saves up to 200 sheet of paper each day, a transition we plan to extend to all our operations.

In Europe, our engineering team benefited from an eco-design training program and CO2 emissions from business travels are calculated with plans to expand this policy company-wide. Implementing eco-friendly initiatives like UPS' Carbon Neutral shipment and many others underline the **priority given to our environmental performance**.

« Achieving ISO 14001 certification marks a pivotal moment in Dickson's journey towards environmental awareness. It validates our ongoing efforts to integrate sustainable practices into our business operations. This achievement reflects our absolute commitment to reducing our environmental impact, improving resource efficiency, while meeting regulatory requirements. As we celebrate this milestone, we're also excited by the opportunities it presents to further innovate and drive positive change within our organization and beyond. »

Mark Solak, Director of Compliance, Dickson

Obtaining the ISO 14001 certification is a **significant milestone for Dickson** as the journey towards environmental sustainability is still ongoing. We remain committed to continuously improving our environmental performance, **setting ambitious sustainability goals**, and engaging with stakeholders to drive positive change for the planet.
